

disrupt this signal. By monitoring the voltage and current of the phone line, these systems can switch to cellular when the traditional phone lines are disabled or cut during a break in.

Advantages of environmental monitoring

Environmental monitoring provides an additional level of peace of mind for home owners.

“Residential customers are usually surprised to learn that many other aspects of home safety can be monitored”, says Tyler Solma, in charge of Engineered Sales, Midwest Alarm Company.

Homes can be protected against environmental fluctuations, such as, changes in temperature, water damage or unhealthy levels of carbon monoxide. Broken pipes, hot water heater leaks, or faulty washing machine hoses can cause serious damage to a home - these potential problems can be uncovered through the use of water detection sensors. Specialized sensors are able to identify shifts in temperature and carbon monoxide sensors detect unhealthy levels of the deadly gas. These sensors can also be integrated into most security systems and monitored by a central station

Benefits of a professionally installed and monitored household fire warning system

Most families do not worry about the

threat of fire in their homes. They are careful and have one or two smoke detectors installed somewhere in their home. However, unlike simple smoke detectors – a professionally installed household fire warning system can monitor a home, providing protection and notification – even when the homeowner is away.

“The technology of the security industry is constantly improving” says Jeff Arnett, Engineered Sales, Midwest Alarm Company, “new opportunities to enhance the protection of families and property – emerge every day”. Effective security systems should be designed to grow with the needs of your family. A thorough investigation of all available security options will guide you to the most efficient investment.

* Check with your insurance agent to determine which system qualifies you for the largest possible discount. 

Midwest Alarm
Security Systems

Founded in 1967, Midwest Alarm Company designs, installs, monitors and services security solutions in homes and businesses throughout Siouland. With offices in Sioux City, Sioux Falls and Omaha, Midwest Alarm provides area clients with the most advanced burglar and fire alarms, closed circuit TV, access control, process and environmental monitoring systems.
